

Zoolab

The children in school were treated to a visit for Zoolab. Each class was treated to a 1 hour talk and practical with life animals with the specific aim to improve the understanding of habitats and how they are adapted to their environments.

As part of our literacy work we have learnt specific features of a newspaper style report.

We used this occasion to practise our reporting skills!

Reports were written by Year 6

Zoolab's visit

On Friday 6th October we were treated to wild animals from Zoolab, such as a corn snake, lop eared rabbit and many more. Amanda talked about how animals adapt to their environment but she also talked about their habitats.

Soon after Amanda showed us a Madagascan spitting cockroach , its name was Jimmy . She told us lots of interesting facts like it can eat through almost anything, it can also stand the effects of a nuclear bomb.

Overall I think the class enjoyed the visit. I'd like to state that the animals behaved very well. I'm sure year 6 can't wait until the next visit.

Visit from Zoo Lab

On the Friday 6th October Amanda from Zoo Lab came to show us a variety of animals.

She explained about adaptation and habitats. She showed us a snake, rabbit, frog, toad, cockroach and gerbil.

Firstly it takes corn snakes 2-5 days to digest their prey. Secondly corn snakes live up to 15-20 years old.

Also corn snakes shed their skin once a month. Corn snakes live in corn fields.

Finally the animals behaved extremely well. We all learnt something new. I think the whole class enjoyed it, after all I only learnt about cockroaches.
